Introduction

Foreword From Our CEO

This year marks an incredible milestone. We are celebrating the fifth edition of the FoodTech 500, the definitive showcase for the most trailblazing businesses at the convergence of food, technology and sustainability. It is amazing to think about how far we've come from our humble beginnings. Throughout our journey, we have been driven by a passion to highlight the **unsung heroes of AgriFoodTech** and champion the global innovators changing the food system, from farm to fork.

From the inception of the FoodTech 500 in 2019, our vision has been clear: to honour those shaping the future of food. We've pioneered a **data-driven method** that identifies and ranks the top 500 international AgriFoodTech companies, and have generated more than 9,000 applications from AgriFoodTech startup and scaleup companies!

Looking back at 2023, it was a pivotal year for Forward Fooding and the FoodTech 500. We launched groundbreaking programs and initiatives: We established the inaugural FoodTech 500 Ambassador program made up of esteemed experts to amplify the voices of FoodTech 'underdogs' worldwide. We embarked on a European Tour for FoodTech 500 with stops in some of the most vibrant FoodTech hotbeds in the world: Barcelona, London, Berlin, and Stockholm. Our efforts have resonated globally. Each one underscored our unwavering commitment to drive progress, foster connections in the industry and enrich our communities.

Since 2021, Forward Fooding has expanded globally. It has worked with esteemed government-backed organisations. They include FoodValley (Netherlands), the UAE FoodTech Challenge (UAE) and EDB (Singapore). These partnerships have been key in expanding our role in the global AgriFoodTech ecosystem. They have forged new pathways for collaboration and innovation and brought invaluable insights back to our community.

Our finalists for this year embody innovation and forward-thinking, selected from over 1,500 entries spanning 77 countries. They represent a diverse array of entrepreneurs who have achieved unprecedented heights in recent years and mirror how the AgriFoodTech sector continues to evolve and enters a new phase.

We're excited to keep celebrating these great companies. We'll also find new ways to spotlight pioneering AgriFoodTech solutions. Let's stay connected, and I invite you to join us in celebrating the innovators behind the FoodTech 500!

Alessio D'Antino
CEO, Forward Fooding

About Forward Fooding

POWERING THE FOODTECH REVOLUTION SINCE 2015

Forward Fooding is the world's first collaborative platform for the food & beverage industry fostering innovation via FoodTech Data Intelligence and corporate-startup collaboration.

WHAT WE DO

FOODTECH DATA

The FoodTech Data Navigator is the world's largest database of the global AgriFoodTech ecosystem. With 24,000+ actors including startups & scaleups, institutional investors, CVCs & other ecosystem players, it allows corporate executives and investors to discover and stay on top of the latest innovations and trends.

[LEARN MORE](#)

CONSULTING & SCOUTING

Leveraging our extensive industry expertise and global AgriFoodTech network, we enable corporations, investors and other food organisations to discover and stay ahead of the latest trends and identify the right partners to engage with to step change their innovation and investment strategy.

[LEARN MORE](#)

STARTUP NETWORK

Through the FoodTech 500, the 'Fortune 500' of FoodTech and our own FoodTech Innovation Hubs across Europe, we provide exposure to leading international AgriFoodTech companies and enable our Hub members to create impact at the local level by tapping into our global network.

[LEARN MORE](#)

FORWARD FOODING COMMUNITY AT THE GLANCE

45+
Corporate clients
Including 7 Fortune 500 companies

25,000+
Newsletter subscribers
including FoodTech entrepreneurs, corporate executives, investors, partners and journalists

9,400+
International FoodTech Startups & Scaleups
In our proprietary database

20+
Resident companies
In our Innovation Hubs in London & Barcelona

9,000+
Startup Applications

The AgriFoodTech Landscape

Why Agrifoodtech?

“AgriFoodTech (or FoodTech) is the emergent sector exploring how technology can be leveraged to improve efficiency and sustainability in designing, producing, choosing, delivering & enjoying food”

*Forward Fooding
AgriFoodTech definition, 2019*

Years of disruptions and turbulences across the global supply chain have taught us that the **food system is ripe for change**. With pressure from demographic shifts, climate struggles, loss of biodiversity, water scarcity and geopolitical conflict piling on top of pervasive issues such as food insecurity and diet-related health problems, this change can't happen soon enough.

Luckily, the **pace of transformation** in the food industry is **quickly accelerating**. Changing consumer behaviour, sustainability concerns, new technological advancements and market opportunities are attracting a new wave of entrepreneurs looking to upgrade one of the world's oldest and biggest industries. Every day, AgriFoodTech entrepreneurs are showing great dedication and resilience to **improve efficiency and sustainability** in our Food System.

Over the past ten years, the **AgriFoodTech sector has catalysed growing attention**, allowing it to expand from a **tiny niche to a global market, with \$241B invested since 2014** to finance tech and biotech-driven solutions around new ingredients, precision agriculture, novel farming systems, functional foods, alternative protein, food waste reduction, food safety & traceability, among many other areas.

The shift involves new companies like startups and scaleups, but also large organisations, institutions and other players looking to harness business opportunities while addressing critical challenges. We believe **entrepreneurship can make a difference in solving some of the biggest issues that are affecting our current food system**. Combined with the infrastructure and expertise from established corporations, it creates the 'secret sauce' for a brighter future of food. These collaborations will create the biggest impact on how we live and the future choices available to us as consumers, and we believe that facilitating these is a true part of our mission at Forward Fooding.

Theory of Change

In the realm of agrifood, the rapid pace of technological advancements is reshaping our social and productive landscapes, heralding a **new era** with the **onset of the Fifth Industrial Revolution**. This transformation is at the heart of our **Theory of Change**, where we envision a future where agriculture and food systems leverage **cutting-edge innovations for sustainable growth**. Our approach is rooted in understanding how these technologies can be harnessed to solve critical challenges, enhance productivity and ensure food security for all. By aligning with the principles of the Fifth Industrial Revolution, we aim to create a more interconnected, sustainable and equitable agrifood sector.

KEY EXTERNALITIES

- Climate change
- Urbanisation
- Water scarcity
- Growing population
- Food borne diseases
- Malnutrition
- Food waste
- Biodiversity loss

AG/FOOD (R)EVOLUTION SEEN THROUGH TECH & SUSTAINABILITY LENSES

DRIVERS

- ESG investing
- Shifting Industry Landscapes
- Regulatory adaptation & mitigation
- Data-empowered Consumers
- Pioneering technology builders
- Improving food experiences
- Optimising food distribution

SYSTEMIC CHANGES

AgroFood Industry

- Increasing crop yields without harming biodiversity and soil
- Optimising crop resilience
- Increasing Circularity
- Making animal farming more sustainable
- Finding novel ways to grow food

Agro-Industrial Ecology

- Shortening the supply chain
- Reinventing proteins
- Improving food safety & traceability
- Making food more nutritious
- Optimising resources & inputs

Socio-demographic

- Providing food security
- Improving health & nutrition
- Exploring innovative models to empower workers across the supply chain
- Optimising food distribution
- Increasing food integrity

DISCLAIMER: THE ABOVE ARE NOT EXHAUSTIVE LISTS. THE ELEMENTS MENTIONED ARE EXAMPLES OF POTENTIAL SYSTEMIC CHANGE AND AIM TO INSPIRE DIALOGUE ON TECHNOLOGY'S TRANSFORMATIVE POTENTIAL

Proprietary Taxonomy

Each company in our FoodTech Data Navigator database and the FoodTech 500 list is categorised according to 8 **'Macro Activities'** covering the entire food supply chain. Each activity is itself divided into **34 'domains'**, and **170+ technology tags** allowing us to cluster the ecosystem by technologies, business model, specific ingredients and market applications, amongst other highly relevant parameters. This allows us to gather granular data to grasp trends and market dynamics. [Click on the icons below to learn more about each Macro Activity.](#)

Key Insights (2021 vs 2023 comparison)

How the AgriFoodTech investment landscape has shifted

Global Venture Capital is going through difficult times, with AgriFoodTech being no exception to the rule. Since its peak year in 2021, **investments in the sector have dropped by 74% to reach \$17.1B in 2023**. Many companies have had to shut down operations in the past year. Yet, making a comparison between 2021 and 2023 makes us understand how the investment landscape has been shifting, and we believe there is room for optimism.

First of all, not only the number of deals hasn't dropped as much as the capital invested (-44%), but the **median deal has actually increased** since 2021.

Mega-deals have vanished (as reflected by the drop in average deal size), and generalist investors are leaving the space, while specialist and impact-focused ones tend to **go 'beyond the hype' to invest in a broader range of solutions across the supply chain** (such as technologies to fight food waste). This translates into a new distribution of investments, previously dominated by Food Delivery and Alternative Proteins (part of our Next-Gen vertical), as well as **a growing proportion of early-stage investments** towards less mature or 'hyped', but nonetheless impactful solutions.

New regional dynamics are also emerging. From 23% in 2021, **36% of total investments in the sector went to European companies in 2023**. Europe is becoming a true Hotbed for AgriFoodTech innovation, while APAC has seen a drop from 11% to 1% (mostly due to a decline in China), and finally, North America continues to lead the sector, gathering 48% of global investments in 2023.

Overall, it is safe to say that **capital is no longer a 'commodity'**. Entrepreneurs have to focus on building 'healthier' businesses with a clear path to profitability, and ideally 'asset-light' models. They also seem to be able to **rely more and more on public funding to support their growth**, as shown by the sharp increase in the number of grants allocated to AgriFoodTech startups.

More patient and smart capital will be needed to solve the challenges of our Food System. Looking at the latest investment figures, this seems to be going in the right direction at the moment.

Max Leveau
Co-founder & COO, Forward Fooding

AgriFoodTech Global Investment Landscape

2021 vs 2023 comparison

	2021	2023
Total investments	\$64.1B	\$17.1B -74%
Number of deals	2040	1132 (-44%)
Average deal	\$31.5M	\$14.1M
Median deal	\$3.1M	\$3.5M
% of total investments towards Food Delivery + Next-gen Food & Drinks	68%	38%
% of total investments towards Surplus & Waste Management	3%	13%
% of Pre-seed and Seed out of total number deals	36%	61%
% of Series A/B out of total number deals	23%	39%
% of Series C+ out of total number deals	8%	8%
% of grants out of total number deals	6%	23%

What is Ahead of Us?

Our take about upcoming evolutions of the sector

Despite the noise, the alternative proteins sector is here to stay

Over the past couple of years, we have witnessed two major ‘forces’ driving the alternative protein sector: **increased consolidations and pressing scepticism**, mostly driven by media, around companies’ ability to scale up production and overcome regulation hurdles (eg. cultivated meat) and, most of all, to create great-tasting products that will determine consumers’ mass adoption in the long haul. Even though investments in alternative proteins have dropped 62% since 2021, the sector has reached a tipping point. Despite the negative investment trend, we believe that the current ‘crisis’ will help this industry in the long term.

These factors are forcing entrepreneurs and investors to focus on turning existing companies with strong fundamentals into profitable businesses while forcing smaller and less-resilient companies to get consolidated or phased out.

For example, we expect to see more **"hybridisation"** in product development. This involves creatively combining protein sources and processes (eg. plant-based proteins with fermented or cultivated fats). By blending ingredients and technologies, companies can address **key product experience elements**. These include **taste, texture, nutritional value** (e.g. via mycelium) and **scalability** (e.g. alternative growth medium for cultivated meat). Moreover, **corporate investments** and **strategic partnerships** with startups are expected to play a crucial role in **overcoming supply chain challenges**. Recent examples are strong signals that the industry is moving in this direction (e.g. **Cargill** collaboration with Enough, **Kraft Heinz** and NotCo ongoing partnership or Remilk with **General Mills**).

Finally, despite reluctance from certain countries (e.g Italy, France), we do expect **cellular agriculture to become regulated by more countries** in the next couple of years. Recent approvals from the FDA, and **investments from various governments** (e.g UK, Canada, Netherlands) to support the research and growth of the sector, alongside precision fermentation, are paving the way towards more regulatory approvals in the near term.

‘Biotech is the new black’

Beyond alternative proteins, we see and expect **more investments to go into biotechnology-based solutions**, across different stages of the supply chain. This ‘trend’ involves for example technologies like **seed genetics, bio-coatings** to extend shelf-life and **biomaterials** for plastic alternatives. When comparing data from 2021 to 2023, **Ag Biotech** for example, which encompasses all solutions leveraging biotechnology and science to increase yield and crop resistance (e.g biofertilizers, crop protection solutions, genetically engineered seeds, plant molecular farming), has enjoyed the **sharpest increase** of all domains of our taxonomy, counting for 3.83% of global AgriFoodTech investments in 2021 to 6.34% in 2023.

What is Ahead of Us?

Despite challenges, indoor farming keeps expanding in 'climate strategic' areas

Some of the **major players** in the indoor farming space have either **shut down** in the past year **or currently facing massive hurdles**, due to rising energy costs and challenges in raising more capital to sustain operations. Yet, we expect **indoor farming to keep growing in "climate-strategic" regions** where it can mitigate the risks of climate change and dependence on imported food. For example, we believe more investment and projects will flood into the **CGG region**, with companies focusing on developing enabling technologies, such as genetics for crops and farming automation, to bolster the industry's supply chain. As the **capex/revenue ratio is proving to be a major hurdle** in this space, this is likely to translate into more **M&A activities** and **more government-backed funding** flowing into this space to accelerate time-to-market and scalability.

Functional foods will keep gaining traction among early-adopters while microbiome-based science will keep advancing to enable personalised nutrition

This fast-growing segment made of tech-savvy and health-conscious consumers seeking personalised nutrition, has witnessed a **significant surge in terms of investments** flowing into this space. The share of global AgriFoodTech funding has seen a sharp increase in areas such as **Functional Foods & Drinks** (1.38% in 2021 to 3.44% in 2023) and **Meal Replacements & Supplements** (0.27% to 2.47%).

Simultaneously, significant advancements in **microbiome-based science** are driving the development of **personalised nutrition solutions**. By analyzing an individual's **unique microbiome composition**, researchers can tailor **dietary recommendations** and **interventions** to optimize health outcomes. This personalised approach to nutrition holds great promise. It can address individual **health needs and preferences**. These range from weight management to chronic disease prevention (like food allergies and intolerances).

Major F&B companies are more and more **active in investing capital** and **exploring strategic partnerships** to capture these opportunities (e.g. **ADM** and Brightseed, **Roquette** and Pharmabiome or **DSM** and Sun Genomics).

Ongoing consolidation will result in a market oligopoly with a few(er) Food Delivery platforms available

Despite the increased consolidation, most **food delivery platforms** around the world still face **big challenges**. This includes **business model flaws**, **regulatory scrutiny**, **labour issues** and for most, a pressing urgency to prove business models' **profitability**. Yet, some companies have made significant strides in **improving their financial performances** and are expected to **report profits** in the near future. For example, **Uber Eats** has already reported its **first-ever profitable quarter** in 2021. This was due to strong growth in delivery orders and ongoing cost-cutting efforts. But more recently in **Europe**, Deliveroo, Just Eat, and Delivery Hero are expected to report their first positive adjusted EBITDA in 2023.

Overall, the consolidation of the food delivery market is **reshaping the industry landscape**, with only **a handful of players** expected to **dominate in the long run**. This consolidation is driven by strategic acquisitions, partnerships and diversification efforts. Companies want to achieve scale, improve profits, and keep their edge in a rapidly evolving market.

FoodTech 500 Ambassadors: **Expert Views**

Daniel Skavén Ruben Solvable Syndicate

After a decade of increasing global agrifoodtech investments, from \$3.1B in 2012 to the record level of \$53.2B in 2021, **investments have declined** by 80%. This has been painful for VCs and startups trying to challenge the status quo. At the same time, there's **increasing pressure from regulators and consumers** to shift to an environmentally sustainable and nourishing food system.

Couple this with the constant plethora of scientific breakthroughs and tech innovations in the food/ag space, and there's reason to **be optimistic that we can continue to drive the necessary food system transformation.** New solutions help cut the need for fossil fertilisers, herbicides and pesticides in agriculture; the supply chain gets digitised; food waste solutions are being rolled out; automation and robotics increasingly happen from farm to fork; sustainable packaging picks up pace; alternative proteins keep improving in terms of taste, price and convenience driven by new ingredients and infrastructure, and so on. Taken together, we see on the horizon a new food system emerging that is environmentally sustainable, nourishing, resilient and equitable.

Susie Warran-Smith CBE DL LTA FoodTech Group and Author of FoodTech UK

The last four years have seen unprecedented disruption both socially and economically across the globe. No country has been unaffected. **COVID, demographic shifts and geopolitical conflict have created an awareness of the issues around food security** which have happened at a time of high inflation and real increases in the cost of living. There is also a greater acceptance that **too many health problems are diet-related** and the industrialisation of food has been an unmitigated disaster for successive generations.

But, despite the turbulence this has created, there are many innovative companies and organisations that are heading a fast-paced transformation in the sector. I am optimistic at the new breed of entrepreneurs who have turned their attention to AgriFoodTech and are quite rightly seeing it as an exciting, challenging and hugely important area for innovation.

This is not just about the development of plant-based or alternative protein products, which **still have a way to go to truly match the taste, texture and nutrition** of its animal-based competitors. There will also be more of a focus on minimising waste by improving food production efficiency and sustainability. I also think there will be many more **interesting and exciting new ingredients**, a focus on precision agriculture, and I look forward to tasty nutritious alternatives that will aid our health, not harm it. What will make a massive difference though, is if those problems can be solved that result in a retail price point to tempt everyone in society.

FoodTech 500 Ambassadors: **Expert Views**

Christian Pichler Gerber VC

The AgriFoodTech industry is experiencing a **growing emphasis on sustainability**. Key international commitments to net zero, changing consumer expectations and innovations competing to add value are reshaping the landscape, with trends anticipated to have an impact in the coming years. Precision agriculture technologies are now used for resource optimisation, improving crop yields and minimising negative environmental impact through data. Vertical farming and indoor agriculture are gaining traction, despite some turbulent times. Gene editing and CRISPR are improving crop resilience, nutritional quality and disease resistance, contributing to food security in the face of climate change. Efforts to reduce food waste along the value chain and innovate packaging are gaining momentum. Embracing alternative protein technologies (plant-based, cell-cultured, molecularly-farmed, and fermentation-derived) is crucial for food security. **These can complement culinary tradition while introducing exciting new options for consumers. But caution is warranted against misinformation spread by traditional lobby groups with vested interests and significant PR resources.**

In general, **a more global approach to enhancing transparency and traceability** in the food supply chain, bolstering food safety, authenticity and consumer trust makes me hopeful that nascent technologies will be allowed to flourish sustainably. I hope that collectively (from the average consumer to critical policymakers) we realise that **to ensure a long-lasting, modernising AgriFoodTech industry, we need to be proactive, financially generous and open-minded.** It would be great, in particular, if we could also spread the word that we have a wonderful opportunity to enhance our culinary experiences, as we continue to evolve our tastes and farming practices. Replicating what we have is not true innovation to me.

I urge the AgriFoodTech industry and the traditional food & beverage and agricultural industries to **be more pragmatic, step out of their respective silos**, and instead of defending each other's short-term interests, try to look for the best, most logical solution to each problem. Step one is to step out of the silo and recognise that we are all here together to bring about positive, sustainable change.

Miguel Jordao Newland Syndicate

The previous decade was marked by persistently low-interest rates, which enabled an **unprecedented influx of risk capital** in the economy. The agrifood sector was no exception and this influx catalysed the development of a plethora of “complete” solutions. These ventures, however, face a notable dichotomy in their applicability within the industry. The complexity and scale of these solutions frequently render them incongruent with established incumbents, posing integration challenges in existing markets. In instances where funding is absent, the viability of these ventures diminishes significantly.

Simultaneously, alternative solutions initially developed with ambitious target outcomes confront impediments in gaining traction. **The requisite behavioural shifts or the elusive measurement of return on investment create substantial hurdles.** The confluence of innovation and practicality has thus far presented challenges in aligning promising solutions with the operational dynamics of the agrifood sector.

Amidst this landscape, interesting opportunities will emerge for:

- UX-centric solutions – especially those that rely on incumbent practices as a starting point and apply technology for incremental gains at very low touch for the end user
- QA / ROI enablers – those that facilitate the assessment of ROI for many of the exciting solutions launched in the past 5-10 years that are currently growth constrained due to vulnerabilities in the evaluation process

The FoodTech 500

About the FoodTech 500

Drawing inspiration from the prestigious Fortune 500, the FoodTech 500 compiles a definitive list of the most innovative global businesses at the convergence of food, technology and sustainability.

The mission of the FoodTech 500 is to highlight the foremost innovators worldwide within the AgriFoodTech ecosystem, spanning from farm to fork. These entrepreneurs and their ventures are pioneering solutions to enhance the global food system.

Now in its fifth edition, this global initiative offers a comprehensive view of the current state of food technology by featuring the latest advancements from international startup and scaleup companies throughout the entire supply chain.

RANKING METHODOLOGY

We used the FoodTech Data Navigator's unique algorithms to process data from each company's application. This gave us a business size score and a digital footprint score. We also evaluated each business's sustainability using a questionnaire created by sustainability experts. This questionnaire considers the Sustainable Development Goals the companies are working towards.

BUSINESS SIZE SCORE

The business size score, generated through a proprietary algorithm, predicts growth based on financial indicators like the number of employees, funding stage, total funds raised and number of offices.

DIGITAL FOOTPRINT SCORE

The digital footprint score, also generated via a proprietary algorithm, predicts digital presence growth based on website traffic, social media performance and follower growth.

SUSTAINABILITY SCORE

We collaborated with sustainability experts from the Department of Management of the University of Turin to create a survey and scoring framework based on selected Sustainable Development Goals from the United Nations.

CREATING THE FINAL RANKING

We combined the three scores (business size, digital footprint, sustainability) to give each company a total score out of 300. This determined their ranking on the list and within specific AgriFoodtech categories.

The 2023 FoodTech 500 Finalists: **The FoodTech 100M Club**

In 2022, we launched the **100 Million club** as a growing number of **companies surpassing \$100 million in funding** were featured in our list.

With a significant amount of funding at their disposal, these companies can afford to spend more on research and development, expand their workforce and even acquire other companies to accelerate their path to success.

To acknowledge these companies' achievements and separate them from the more early-stage players, we created the \$100 Million Club. As the name suggests, **this category comprises startup and scaleup companies that surpassed the \$100 Million mark in funding** and are making big waves in the industry. On the 2023 FoodTech 500 list, these outliers will be identified by a distinctive C-shaped mark, and in future iterations, they will have their very own ranking.

As funding over the last two years has started to dry up, we see this trend being reflected on this year's list with **only 14 companies** being featured in the FoodTech 500 100M Club, compared to 23 companies in the 2022 edition.

The 2023 FoodTech 100M Club counts 8 members, each with its game-changing solution and unique approach to transforming our food system. Here are our club members at a glance:

Annex

Credits and Media Partners

The 2023 FoodTech 500 was prepared by the multi-disciplinary team of Forward Fooding, under the direction by its founders, Alessio D’antino and Max Leveau. The following individuals have collaborated to bring to life this year’s annual ranking: Jennibeth Paglinawan, Chloe Perez, Marwa Mayan, Sol Ponteville, Enrico Rivara and Kristine Lucas, among other collaborators.

Special recognition goes to the sustainability experts from the Department of Management at the University of Turin, Italy, including Paola De Bernardi, Simona Grande and Alberto Bertello, who played a crucial role in developing the methodology for the sustainability score.

Credits also to our tech partner Market & Competitive Intelligence platform [DataScouts](#), which has enabled us to build the FoodTech Data Navigator, the world’s first Data Intelligence platform for the AgriFoodTech industry. The FDN was used extensively in our scoring system to rank the FoodTech 500 finalists.

Finally, thank you to all our media partners, all the participants and to everyone who supported us in creating the fifth edition of FoodTech 500.

Global Tour

The **2023 FoodTech 500 Global Tour** is the annual celebration of the FoodTech 500 finalists where we gather our community in some of the most vibrant FoodTech hotbeds across the globe.

Join our community at one of the local FoodTech 500 events:

- **London** (Kick-off: March 13th)
- **San Francisco** (March 21st)
- **Stockholm** (April 9th)
- **Barcelona** (June TBC)
- **Dubai** (September TBC)
